#### **Taxonomic descriptions**

##### **Order-Oscillatoriales**

##### **Family-Pseudanabaenaceae**

##### ***Leptolyngbya valderiana* (Gomont) Anagnostidis et Komarek **Fig. 7-8****

Komarek and Anagnostidis 2005, fig. 260

Thallus expanded, slippery. Filaments variously curved, flexuous, densely packed and entangled. Sheaths thin, firm, diffluent, mucilaginous, sometimes indistinguishable. Trichomes pale to bright blue-green, feebly constricted at the cross-walls, not attenuated at the ends, straight. Cells  $2.5-7.5 \times 1.5-2 \mu\text{m}$ ; cell content homogeneous. Apical cells  $\pm$  rounded, without calyptra or thickened outer cell wall.

Habitat- Brackish water in the mangrove region.

Voucher Number- CUH/AL/MW/CYANO-174, CUH/AL/MW/CYANO-172

***Limnothrix vacuolifera* (Skuja) Komárek ex G.McGregor Fig. 11**

Komarek and Anagnostidis 2005, fig. 84

Filaments solitary, free-floating,  $\pm$  straight or slightly and irregularly waved or coiled, long.

Sheaths are acceptable, colorless, thin, firm and smooth, overlapping the trichome ends.

Trichomes not or very slightly and indistinctly constricted at crosswalks, not attenuated towards the ends, wide. Cells  $1.3-2 \times 3-23 \mu\text{m}$ , blue-green, with aerotopes at crosswalls. Apical cells are rounded, without calyptra or thickened cell walls.

Habitat- Hotspring

Voucher Number- CUH/AL/FW/CYANO-104

**Family-Phormidiaceae**

***Planktothrix pseudagardhii* Suda Fig. 5-6**

Komarek and Anagnostidis 2005, fig. 500 b,d

Trichomes pale blue-green or yellow-green, solitary, sometimes entangled, straight, not constricted at cross-walls. Cells with aerotopes,  $1.2-4.2 \times 3.0-6.4 \mu\text{m}$ ; apical cells rounded, tapered, bluntly-conical.

Habitat- Suburban areas.

Voucher Number- CUH/AL/FW/CYANO-98, CUH/AL/FW/CYANO-96

***Phormidium autumnale* [Agardh] Trevisan ex Gomont Fig. 13-14**

Komarek and Anagnostidis 2005, fig. 707

Thallus brownish-green. Filaments were straight, primarily entangled. Sheaths are thin, distinct, amorphous, and mucilaginous. Trichomes are dirty green, sometimes slightly constricted at the frequently granulated cross-walls, attenuated somewhat at the ends. Cells  $2-4 \times 4-6 \mu\text{m}$ . Apical cells are frequently somewhat elongated.

Habitat- Suburban areas.

Voucher Number- CUH/AL/FW/CYANO-94

***Desertiflum* sp.** Dadheech & Krienitz **Fig. 12**

Dadheech *et al.* 2012, pg 260, fig. 1-8

Thallus bright blue-green, filaments solitary, filaments slightly constricted at cross walls, trichome 2.0–7.0 µm wide, attenuated at the ends, cells cylindrical, isodiametric or up to 2× longer than wide, sometimes slightly barrel-shaped, cell content homogenous, gas vacuole absent, apical cells long–conical and rounded apex, curved.

Habitat- Suburban areas

Voucher Number- CUH/AL/FW/CYANO-260

***Planktothrix* sp.** Anagnostidis et Komarek **Fig. 15-16**

Komarek and Anagnostidis 2005, fig. 354

Trichomes solitary, free-floating, ± straight constricted at cross-walls, gathered (after reaching a particular concentration) into accessible, irregular clusters, 3-12 µm wide; false branching absent. Cells cylindrical, rarely ± slightly barrel-shaped, usually a little shorter than wide or up to ± isodiametric, seldom longer than wide; thylakoids ± radially arranged, aerotopes (groups of gas vesicles) distributed obligatorily over the whole protoplast. Apical cells are widely rounded.

Habitat- Suburban areas

Voucher Number- CUH/AL/FW/CYANO-104

**Family-Oscillatoriaceae**

***Lyngbya aestuarii*** Liebman ex Gomont **Fig. 26**

Komarek and Anagnostidis 2005, fig. 947-948

Thallus ± widely expanded, dark blue-green to black, mostly attached to the substrate. Filaments long, almost straight, entangled, 14-30 µm wide. Sheaths are thin, smooth, yellow-brown, and lamellated. Trichomes olive-green, 10-21 µm wide, not constricted at the granulated cross-walls,

cylindrical, not attenuated at the ends. Cells short, discoid,  $2-2.5 \times 8-10 \mu\text{m}$ . Apical cells are flat-rounded with thickened outer cell walls.

Habitat- Brackish water in mangrove region.

Voucher number- CUH/AL/MW/CYANO-136

***Oscillatoria princeps* Vaucher ex Gomont Fig. 25**

Komarek and Anagnostidis 2005, fig. 883

Thallus blackish blue-green  $\pm$  thin, free-floating, forming small clusters of filaments. Trichomes dark blue-green, slightly constricted at ungranulated cross walls, not attenuated at the ends. Cells  $0.5-1 \times 15-20 \mu\text{m}$ . Apical cells are flat and rounded.

Habitat- Aquatic habitat in northern hilly areas.

Voucher Number- CUH/AL/FW/CYANO-72

***Oscillatoria sancta* Kutzing ex Gomont Fig. 9**

Komarek and anagnostidis 2005, fig. 890

Thallus dark black-blue. Trichomes greyish to brown-violet,  $7-18.5 \mu\text{m}$  wide, straight, sometimes slightly constricted at the granulated cross-walls, not attenuated at the ends. Cells discoid,  $1-2 \times 5-6 \mu\text{m}$ . Apical cells are hemispherical with thickened calyptroid outer cell walls.

Habitat-Suburban areas

Voucher Number- CUH/AL/FW/CYANO-89

***Plectonema tomasinianum* Bornet ex Gomont Fig. 23,24,27**

Komarek and Anagnostidis 2005, fig. 984

Filaments densely entangled, blue-green. Filaments  $11-18 \mu\text{m}$  wide, rich or sparse, scotoma-like pseudoranch; branches single or in pairs, fasciculate erect, diverged. Sheaths are initially thin, hyaline colorless. Trichomes are green, mostly constricted at the sometimes granulated cross

walls, not attenuated at the ends. Cells discoid,  $3-9 \times 11-22 \mu\text{m}$ . Apical cells are rounded, without calyptras or thickened cell walls.

Habitat- Aquatic habitat in lateritic soil area.

Voucher Number- CUH/AL/FW/CYANO-138, CUH/AL/FW/CYANO-121,  
CUH/AL/FW/CYANO-127

***Lyngbya birgei* G.M. Smith Fig. 17-22**

Komarek and Anagnostidis 2005, fig. 954

Filaments straight or curved, solitary, free-swimming,  $20-24 \mu\text{m}$  wide; sheaths firm, colorless,  $0.5-4 \mu\text{m}$  wide; trichomes not constricted at the cross-walls, not attenuated at the ends, cells  $2-2.5 \times 18-23 \mu\text{m}$  long, sometimes with aerotopes, apical cells widely rounded.

Habitat- Aquatic habitat in northern hilly areas, lateritic soil, and suburban areas.

Voucher Number- CUH/AL/FW/CYANO-74, CUH/AL/FW/CYANO-161,  
CUH/AL/FW/CYANO-134, CUH/AL/FW/CYANO-124, CUH/AL/FW/CYANO-120,  
CUH/AL/FW/CYANO-111

***Lyngbya semiplena* J.Agardh ex Gomont Fig. 28**

Komarek and Anagnostidis 2005, fig. 929

Thallus yellowish-green. Filaments entangled, coiled,  $7-15 \mu\text{m}$  wide. Sheaths are colorless, somewhat mucilaginous, homogeneous when young, and lamellated when aged. Trichomes blue-green, olive-green or yellowish-green,  $7-10 \mu\text{m}$  wide, not constricted at the often granulated cross-walls, sometimes slightly attenuated at the ends. Cells are concise,  $1/3-1/6$  as long as wide,  $2-3 \times 6-7 \mu\text{m}$ . Apical cells are rounded-conical, with depressed-conical or rounded calyptra.

Habitat-Brackish water in mangrove region

Voucher Number- CUH/AL/MW/CYANO-246

***Phormidium formosum* (Bory ex Gomont) Anagnostidis & Komárek Fig. 4**

Komarek and Anagnostidis 2005, fig. 602

Thallus dull blue-green. Trichomes  $\pm$  straight, long, 4-6  $\mu\text{m}$  wide, slightly or sometimes not (with the exception of the cells at the ends) constricted at the usually finely granulated, sometimes ungranulated cross-walls, slightly attenuated at the ends and bent. Sheaths thin, rarely developed, usually missing. Cells nearly isodiametric or up to 2  $\times$  shorter than wide, 2.5-5.6  $\mu\text{m}$  long; cell content finely granulated, or sometimes with large cyanophycin granules. Apical cells obtuse-conical, rounded-conical or acutely-rounded, not capitate, without calyptra or thickened outer cell wall.

Habitat-Suburban areas

Voucher Number- CUH/AL/FW/CYANO-248
